

# Session - 11

(Networking)

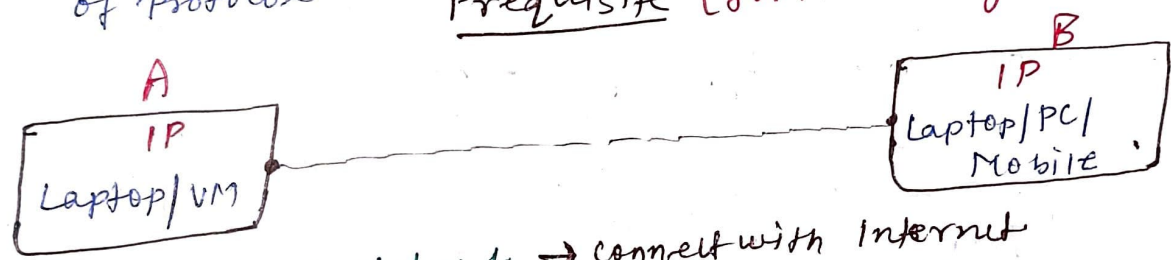

Protocol

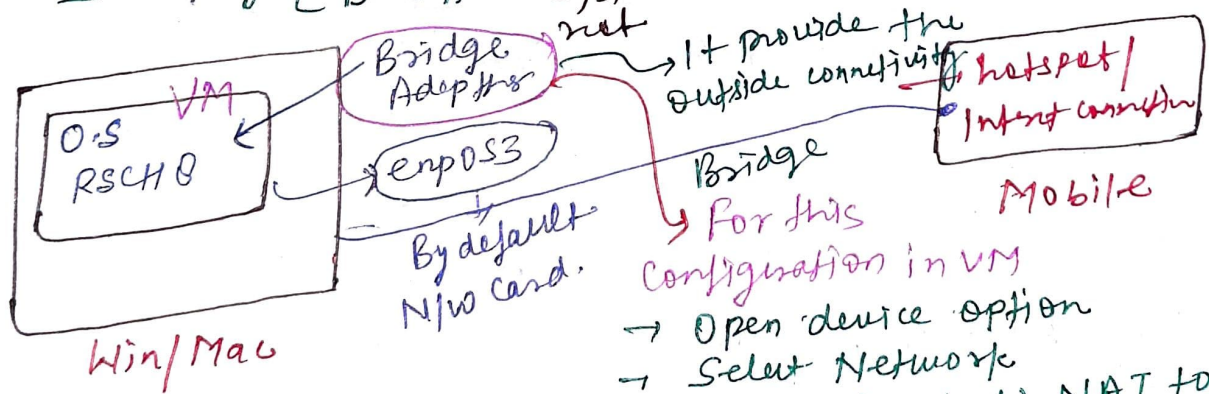

## Note!

1. For access any Website we use protocol which is known as HTTP.
2. For mail or data access we use protocol which is known as SMTP.
3. For download → FTP  
it means when we do anything on Internet behind the scene we are using any kind of Protocol

## Prerequisite (for Networking task)

- i) Physical Network → connect with Internet
- ii) IP Address → find your system IP address
- iii) Ping { A → B } → using Ping you can find that your system is connected with Network or not  
              { B → A }

- For this configuration in VM
- Open device option
  - Select Network
  - Change (Adapter!) NAT to Bridge Network

> route -n → for check the IP address of connected device, though which we are using Internet eg Mobile
