Session - 20

SSH :

- ssh always work on port no. 22.
  > vim /etc/ssh/sshd_config → this file contain all internal info. of ssh

Ques ! Can we change the port no. of ssh ? & how ?

Sol (1) > vim /etc/ssh/sshd_config
   ↳ change the port no. in file & save

   (2)   Start the service again
   > systemctl restart sshd

Note! Everything is done by our hand, but it genrally give error due to security issue
   for this we need to stop selinux security.
   > getenforce
   > setenforce 0

   Now you can start your ssh servert
   > systemctl restart sshd

> W → it will show all the user which is currenty login in your system

Note ! the GUI Program that you run on your system is also one kind of server > xhost
   for enable use > xhost +
